Label Verifier – System Process Flows

The diagrams below use Mermaid. They render automatically on GitHub and in VS Code (Markdown Preview Mermaid Support extension).

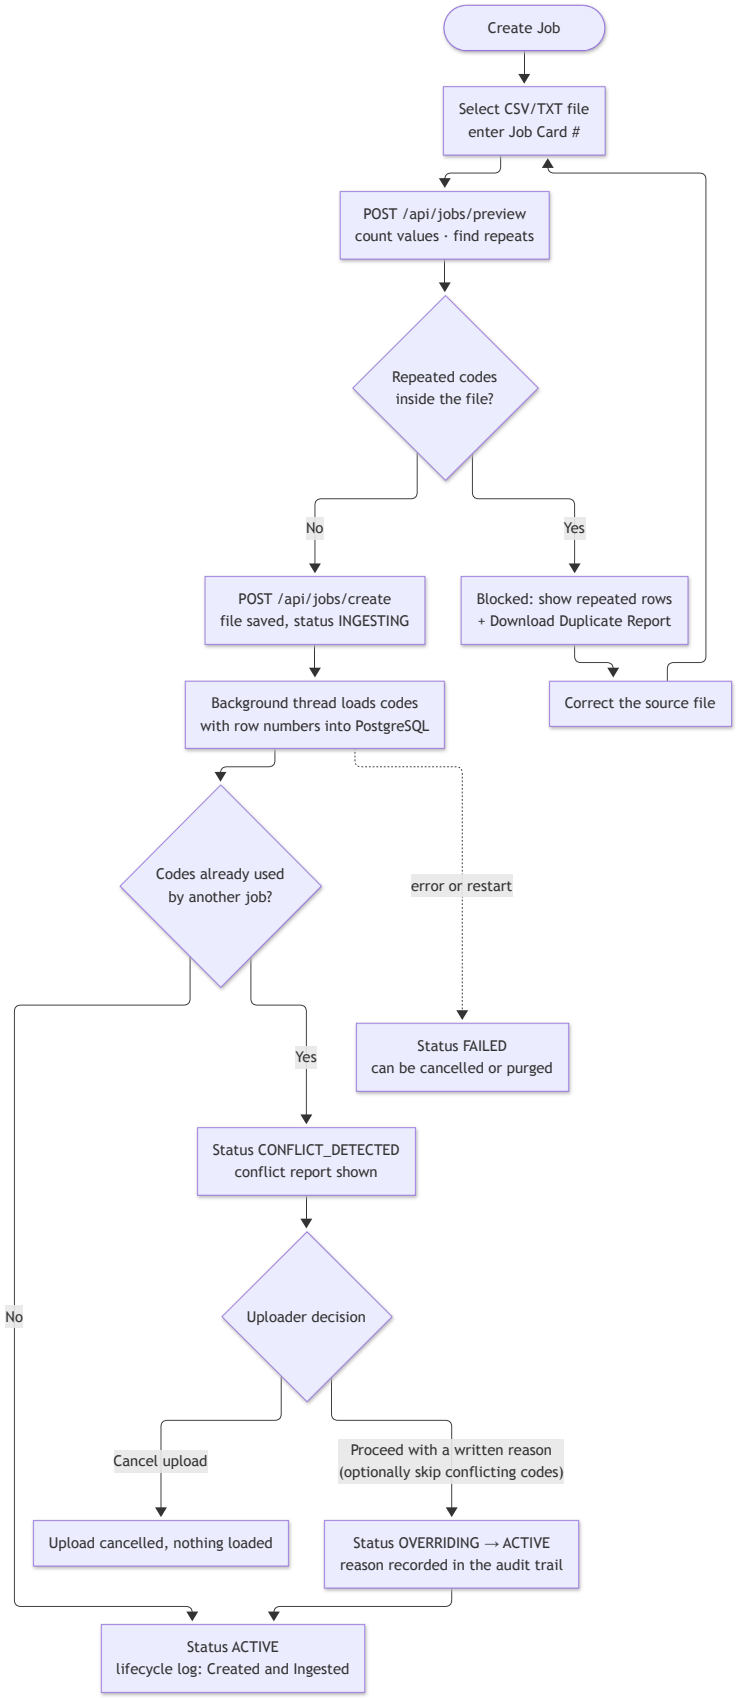

1. System architecture

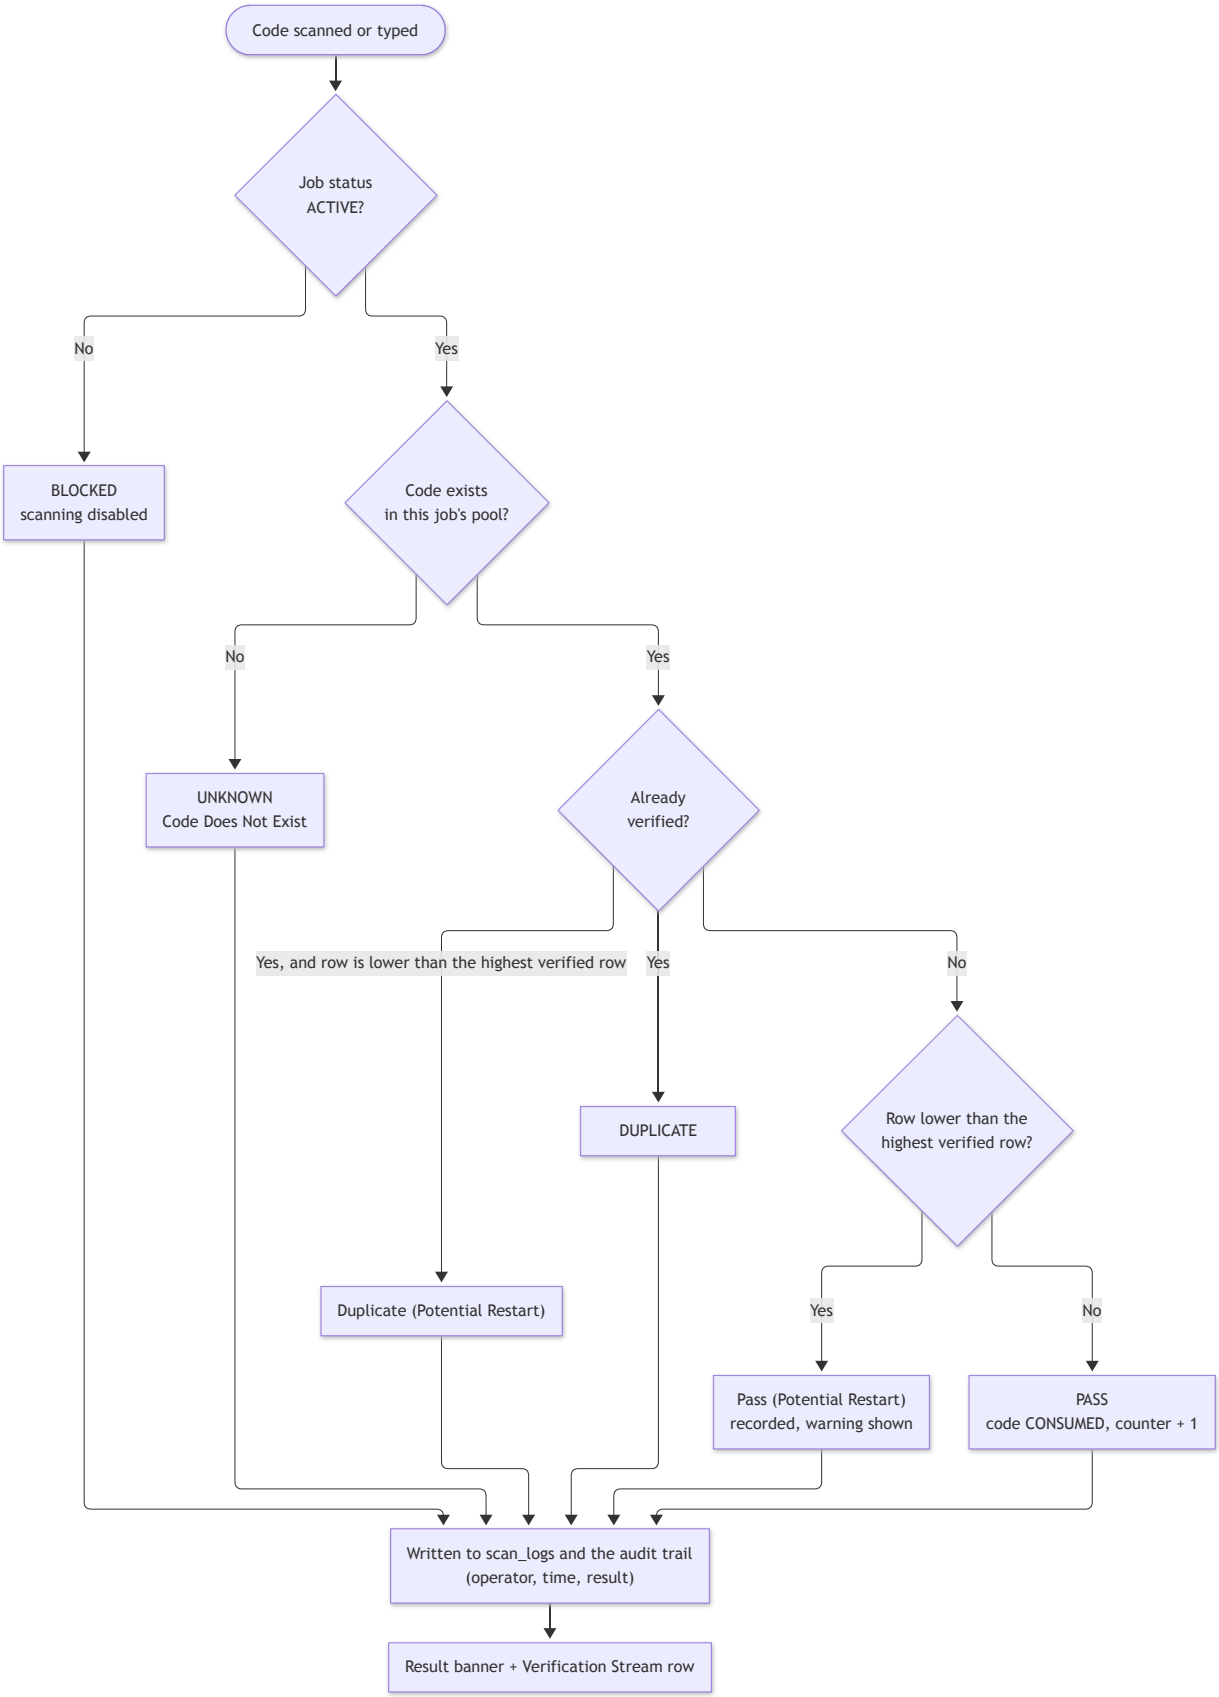

2. End-to-end production workflow

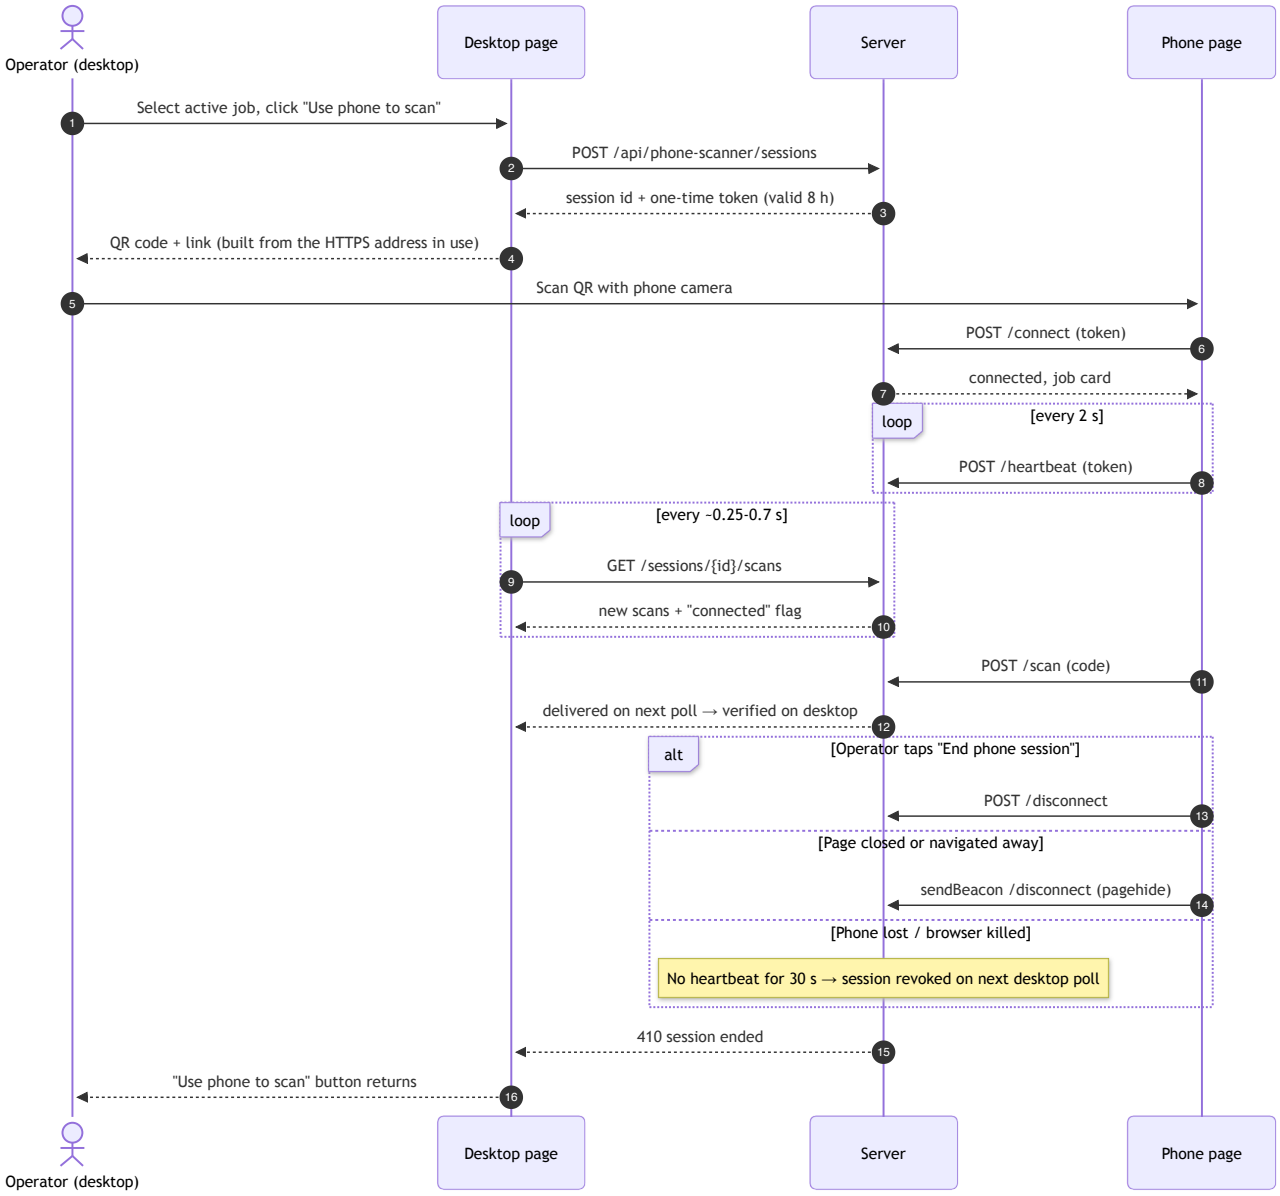

3. Job creation and code ingestion

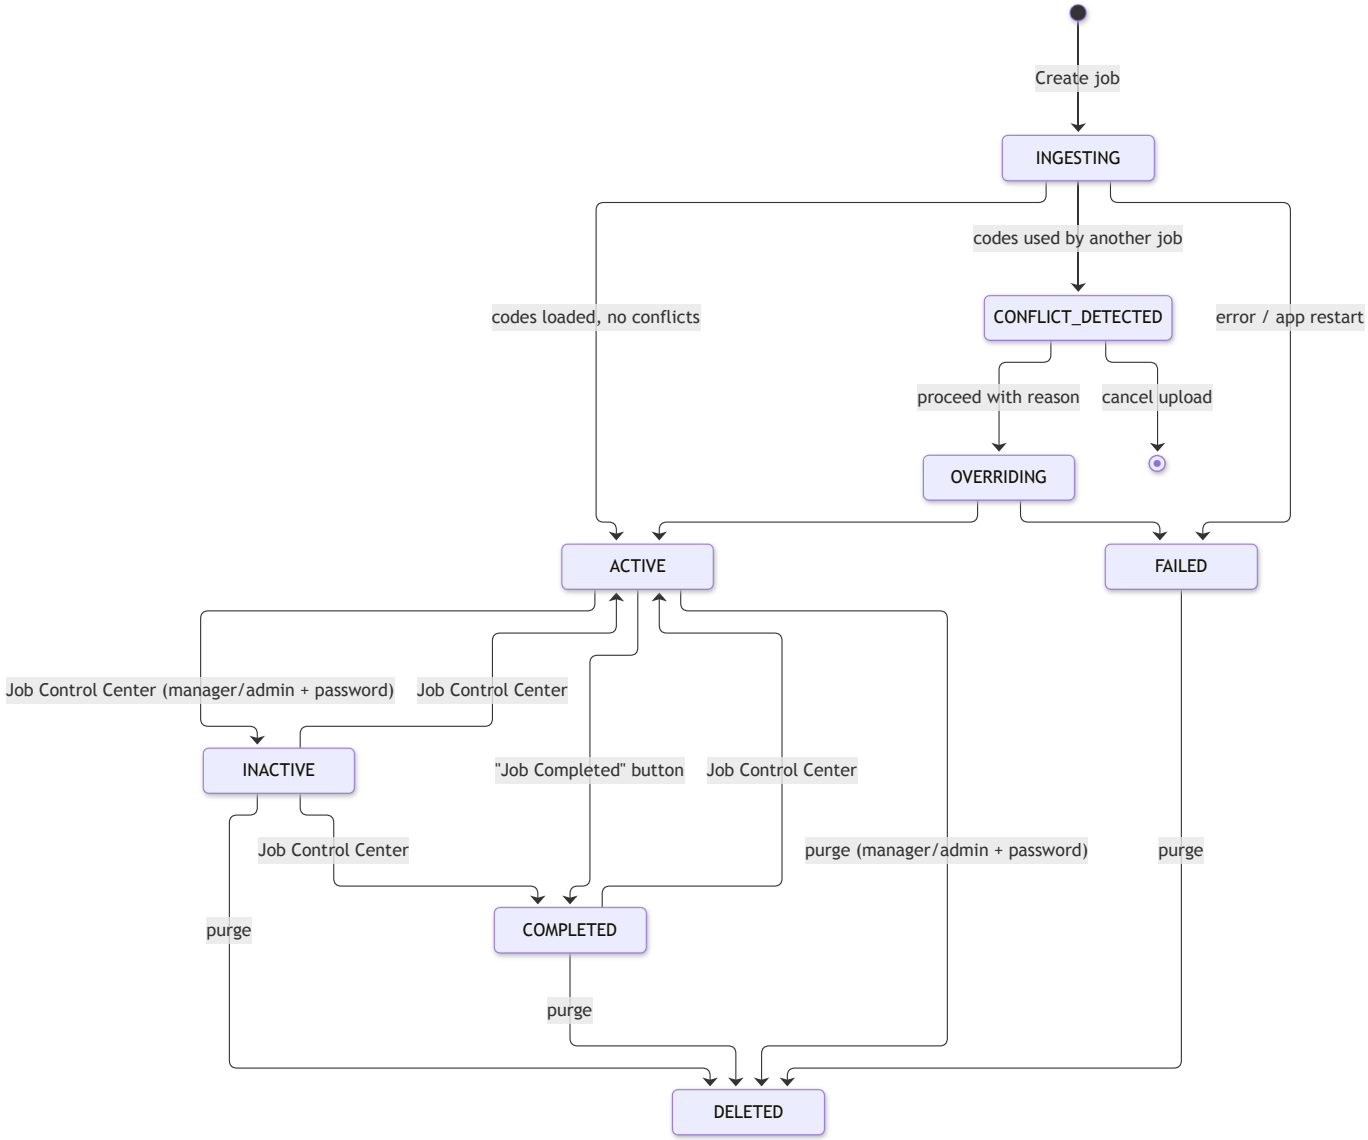

4. Scan verification logic (per code)

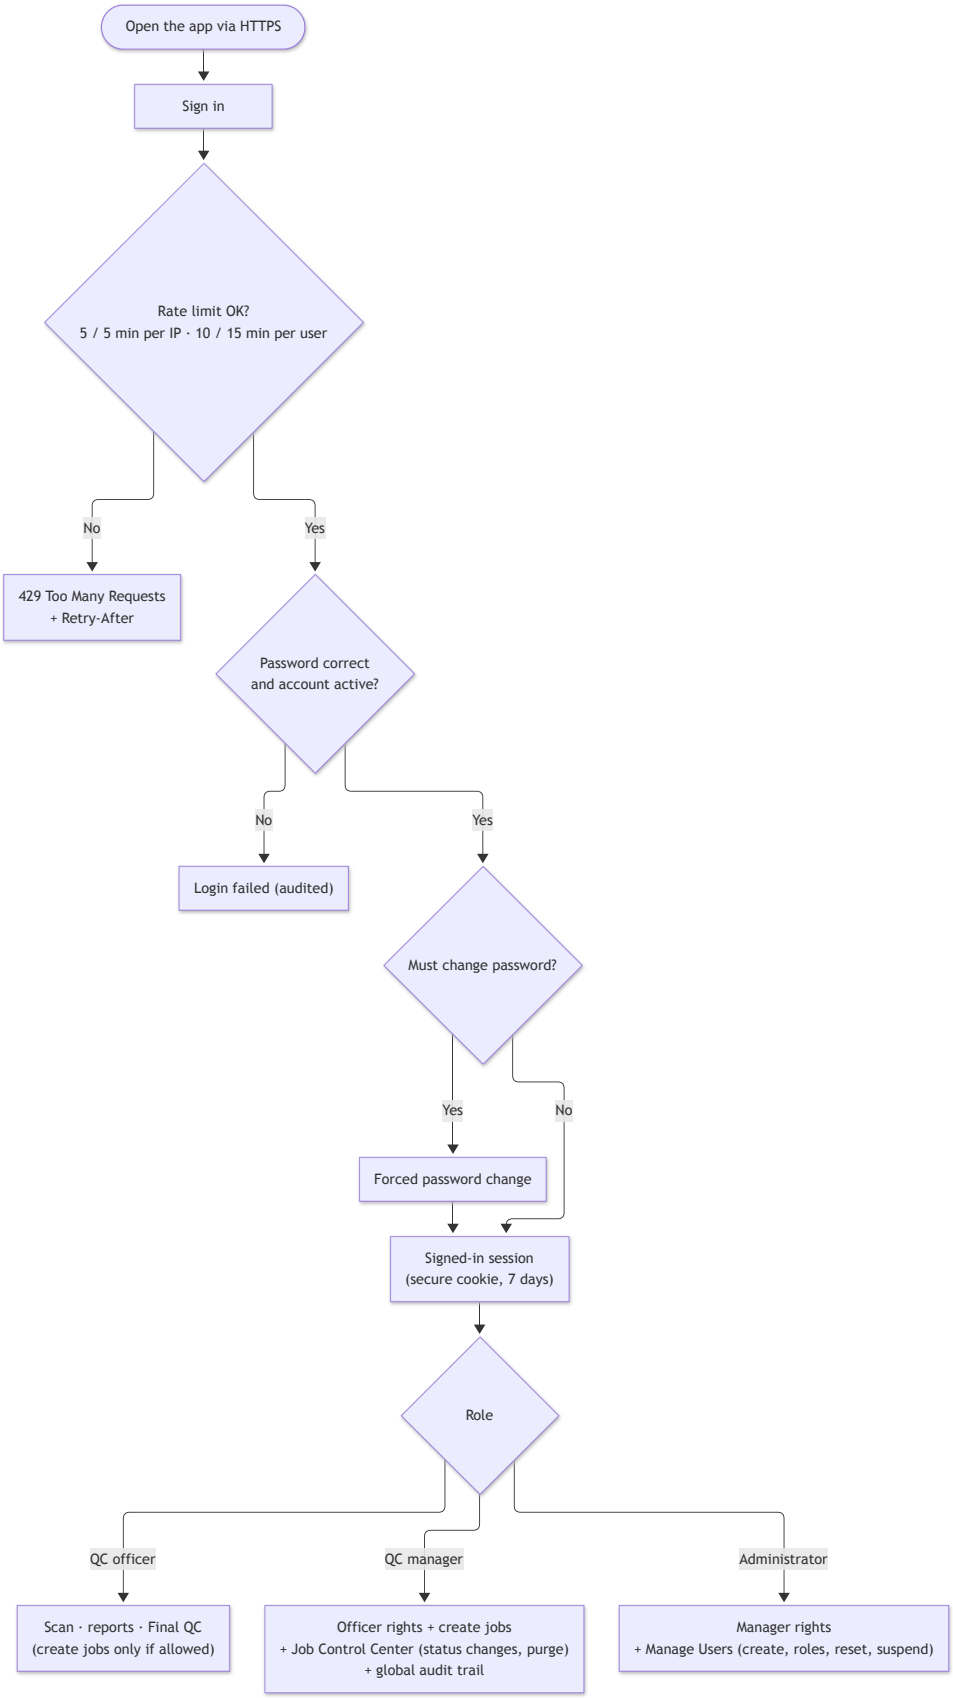

5. Phone scanner pairing and session lifecycle

6. Job status life cycle

7. User access and security flow

8. Backup and restore flow
